HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

DETAILED ACTION

This Office Action is in response to Applicant's Amendment filed April 9, 2008. Claims 1, 2, 9-12, 14, 17, and 23 have been amended. Claim 4 has been cancelled. No new claims have been added. Currently, claims 1-3 and 5-24 are pending.

Response to Amendment

1. Applicant's submission of English language translations of the foreign patent documents listed in the Information Disclosure Statement successfully overcomes the objection set forth in paragraph 2 of the previous Office Action.
2. Applicant's amendment to claim 8 successfully overcomes the objection set forth in paragraph 2 of the previous Office Action.
3. Applicant's amendments to claims 9-11, 14, 20-21, and 23 successfully overcome the rejections under 35 U.S.C. 112, second paragraph as set forth in paragraphs 5-8 of the previous Office Action.
4. Applicant's amendment to the drawings successfully overcomes the objection set forth in paragraph 9 of the previous Office Action.
5. Applicant's amendment to the specification successfully overcomes the objection set forth in paragraph 10 of the previous Office Action.

Response to Arguments

6. Applicant's arguments, see page 12, paragraph 2 – page 13, paragraph 1, filed April 9, 2008 with respect to claim 1 have been fully considered and are persuasive. The rejection of claim 1 has been withdrawn and is further discussed below.

Information Disclosure Statement

7. The information disclosure statement (IDS) submitted on April 9, 2008 was filed after the mailing date of the Non-Final Rejection on October 9, 2007. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

8. Claims 1-3, 5-24 allowed.

9. The following is an examiner's statement of reasons for allowance: Applicant discloses a neutron dosimeter that is capable of detecting high-energy neutrons, fast neutrons, and low-energy neutrons which have been defined to have approximate ranges of greater than 10 MeV, 100keV - 10 MeV, and less than 100 keV, respectively. High-energy neutrons are detected by interacting with metal atoms in a manner that yields protons, alpha particles, or other charged particles (i.e. electrons, positrons) by. Fast neutrons are detected by interacting with a hydrogenous material in a manner that yields protons, as is well known in the art. Low-energy neutrons, which are known to include thermal neutrons, are converted into either protons or alpha particles after interaction by any suitable material. The resultant particles (protons, alpha, electrons, positrons) are incident on a detection element.

The closest art of record, Kitaguchi et al. (US Patent No. 5,321,269) teaches a neutron dosimeter that detects both fast and low-energy neutrons that comprises a semiconductor detector on which a layer of Boron (low-energy neutron interaction) and a hydrogenous layer (fast neutron interaction) are disposed (col. 3, lines 36-45). The Boron layer is disposed directly onto the semiconductor (col. 9, lines 20-26). The dosimeter can be a phantom that may have a variety of geometrical configurations so to facilitate directional distribution measurements (col. 15, lines 27-40). However, Kitaguchi et al. do not teach or fairly suggest a layer of metal atoms arranged as high-energy neutron proton converters to facilitate detection of neutrons with energies greater than 10 MeV. Sun (US Patent No. 5,278,417) teaches a neutron dosimeter configured to detect energies ranging from 0.025 eV to 1 GeV. However, Sun does not teach using alpha or charged particle generators to detect the neutrons. Instead, concentric spheres with different moderating values serve to slow down (make less energetic) the neutrons within the aforementioned ranges so that they are converted to thermal neutrons that may be detected by conventional means (col. 2, lines 60-68; col. 4, lines 5-15). Eisen et al. (US Patent No. 4,383,179) teach a neutron dosimeter using either a polycarbonate foil or a metal (chromium) proton radiator, but the proton radiator is configured to interact with neutrons that fall within the fast neutron energy range instead of the high-energy range required by claim 1 (col. 1, lines 50-65). Therefore, it follows that prior art of record does not teach or fairly suggest a dosimeter such as that of Kitaguchi et al. that is expanded by the addition of metal atoms in order to increase the sensitivity of the dosimeter to include high-energy neutrons (energies greater than 10 MeV).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
